Chad Koslovsky

Hands-on systems engineering | Support that stays connected

Milliken, Colorado · chad@koslovsky.xyz

Junior Systems Administrator | Telnyx

01 PROFILE

Systems engineer and technical-practice founder with managed-services support, NOC leadership and direct client IT responsibility. Rebuilt legacy servers and endpoints, connected business locations and modernized production infrastructure. Builds operational tooling and access-controlled AI integrations while staying close to the people who need the systems to work.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Own client systems from implementation through operation and direct on-call support, bringing in specialists when a project needs additional craft.

Built tenant-aware services and access-controlled SaaS/AI connectors, including integrations with Slack, Google Workspace and Atlassian.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC and infrastructure escalations; after years with the company, held sole systems-engineering responsibility for about a year while the NOC retained first-line coverage.

Migrated workloads from Hyper-V and VMware ESXi to Docker and Kubernetes, upgraded servers and firewalls, and ran SOC 1/SOC 2 audits with documented controls and operating procedures.

Systems / Software Engineer · Office Evolution | 2014-2015

Built internal systems connecting CRM, provisioning, onboarding and service operations across locations.

Made departmental handoffs explicit in shared applications and worked with the CEO and CIO on the supporting systems.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported networks, systems and endpoints for managed-service clients, working directly with business owners and end users.

Built diagnostic and support tooling around recurring problems, used monitoring in troubleshooting and provided on-call coverage.

Infrastructure and Systems Focal · IBM | 2010-2012

Operated shared enterprise infrastructure and hosted desktops, coordinating changes and escalations across application, infrastructure and vendor teams.

Automated audit and backup workflows and managed virtualization test labs.

03 SELECTED WORK

Excell Services | Legacy IT and branch connectivity · Client work through Technomancy IT, Wray, Colorado

Excell Services needed its legacy IT brought forward. Through Technomancy IT, I rebuilt or replaced servers and employee computers, upgraded networking and connected a satellite location using VPN, Windows Server and Active Directory.

Corporate users gained the access they needed; investigating carrier costs also secured a one-time $15,000 CenturyLink refund.

Technomancy | Support context and operational tooling · Own technical practice and support platform

My support platform brings tickets, customer records and infrastructure context together for a small technical practice. I built tenant-aware services and access-controlled SaaS/AI integrations so support work can use that context without merging client access boundaries.

Deployment tooling records Git-derived image identities and checks service health; a separate PostgreSQL restore-check workflow makes backup verification a concrete operation.

ProofMark | Signing workflow and audit history · Completed client engineering contribution

For ProofMark’s document-signing product, I completed a client contribution designing how identity checks, document routing and audit history fit together, with explicit verification, encryption and fallback paths.

The work connected PDF handling, APIs and integrations into a signing workflow that kept security-sensitive state and the event record explicit.

04 CAPABILITIES

Networks, DNS, VPNs and firewalls · Windows Server, Active Directory and Linux · Monitoring, troubleshooting and on-call support · Python and Bash automation · Agentic workflows and Slack/SaaS integrations
